

Taking a Proactive Approach to **SUPPLY CHAIN RESILIENCE**

How to get ahead **today** with
automation that will take you
through **tomorrow**

The Matter at Hand

Tariffs Are Coming: Is Your Supply Chain Ready?

The potential of increasing tariffs under the new administration could drive up import costs, disrupting supply chains. Companies are scrambling to move goods quickly — are you prepared to handle these changes?

The Impact

Higher Costs & Delays Ahead

New tariffs could hike prices for key imports and raw materials. Expect supply chain delays as companies reroute shipments to avoid tariffs, risking stock shortages and delivery issues.

The Risk of Delaying Automation

The Cost of Waiting: Automate Now or Pay More Later

Delaying automation means higher future costs. As tariffs increase, automation prices will also rise due to growing demand and the need for more complex solutions. Act now to lock in lower costs and avoid falling behind competitors already streamlining their operations.

Why Act Now?

Automation: Your Buffer Against Disruption

Front-loading shipments is a temporary fix. Automation offers a sustainable solution to maintain efficiency by optimizing costs and reducing dependencies on labor-intensive processes, which in turn offsets increased expenses from tariffs. Preparing now can mitigate disruptions when the tariffs hit hard.

Speed of Deployment

Go Live Faster with an Advanced WES

Contrary to popular belief, robotic automation can be deployed in weeks, not months. Through an advanced WES with multiagent orchestration (MAO) capabilities, new bots can integrate seamlessly into existing setups – even multi-vendor environments – adding capacity without disrupting operations. Quick deployment ensures you can stay ahead of supply chain issues.

Future-Proof Your Operations

Don't wait for tariffs to impact your bottom line. [Connect with GreyOrange](#) today to explore how automation can safeguard your supply chain and keep your business running smoothly.

Visit greyorange.com to explore our suite of robust products and automation solutions. Or schedule a call with one of our automation experts for more in-depth information.
